

Real-Time ML Prediction System

Objective:

The objective of this project is to create a real-time machine learning prediction system using Python and Streamlit.

Technologies Used:

- Python
- Scikit-learn
- Streamlit
- Pandas
- Joblib

Model Used:

Linear Regression model is used for house price prediction.

Working:

1. Dataset is created.
2. Model is trained using Linear Regression.
3. Model is saved using Joblib.
4. Streamlit web app is created.
5. User enters area and bedrooms.
6. System predicts house price instantly.

Features:

- Real-time prediction
- Simple user interface
- Fast results

Result:

The system successfully predicts house prices based on user input using a machine learning model.

Conclusion:

This project helped in understanding machine learning model training and deployment using Streamlit.
